

Celebrate National Forage Week

June 19 – 25, 2016

Forages are the most important plants on earth.

Forage grasses provide most of the nutrition for cattle, sheep, goats, horses and mules, as well as wildlife habitat.

Did you know?

One out of every 4 acres in the U.S. produces forage, for a total of 528 million acres in forage alone. In the U.S., forages feed 109 million head of livestock (more than the combined population of the top four most populated states of California, Texas, Florida and New York).
